

I want to show the result of the experiment with custom esim reseller system over the period of 4 weeks.

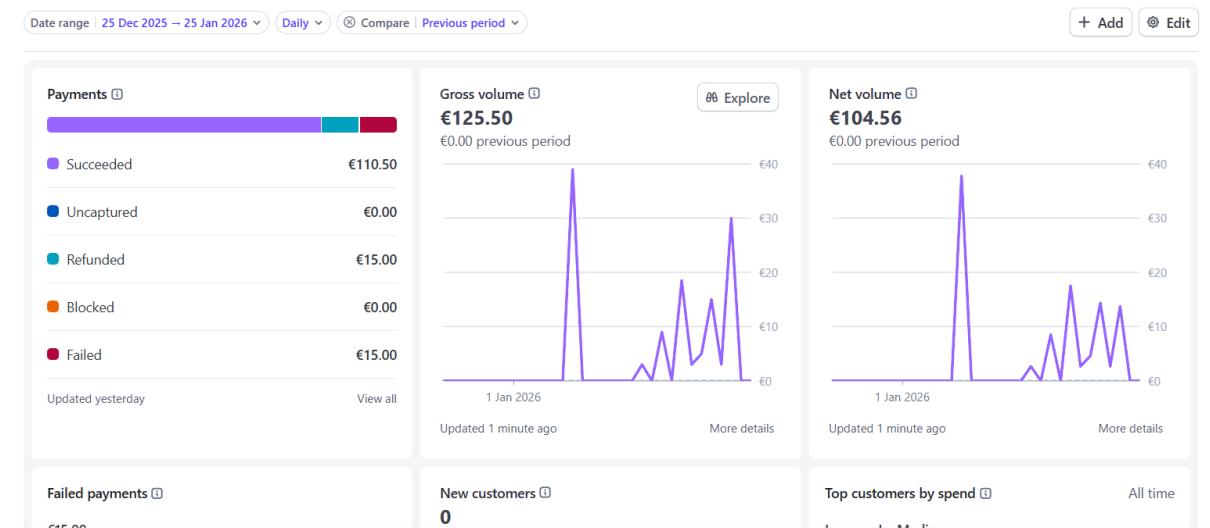

The system is based on a one-page website where all items (products and links) are pulled from Google Sheets. It is fully automated and it cost only \$19 a month, in form of addon for Stripe. Configuration is easy. It is possible to host it anywhere, as on Cloudflare Workers (for free) and the only cost to set up the website is domain.

Our recommended supplier (after approval) will ask for a minimum deposit of \$50.

So far, the experiment is realised with pilot site: <https://sofortnetz.de> which is produced to get organically visible in shortest period of time. So, we did not used any kind of advertising over this experiment, and so far this is what we get:

We had a first sale at January 7. Up to Jan 23, the system spent \$43.22. Revenue was \$129.89.

Summary Table

Metric	Result	Interpretation
Profit	\$86.67	Absolute cash gain.
ROAS	300.53%	Efficient, as it is over 100%.
ROI	200.53%	High return on the \$43.22 invested.
Margin	66.73%	High profitability per unit sold. ◆

In the same period of time we had only 81 visitor.
